<b>Editorial</b>	<b>vi</b>
<b>Contents</b>	<b>xi</b>
<b>Preface</b>	<b>xv</b>
<b>Color Plates</b>	<b>CP-1</b>
<b>1 Respiratory Chains in Archaea: From Minimal Systems to Supercomplexes</b>	<b>1–33</b>
<i>Günter Schäfer</i>	
Summary	1
I. Introduction	2
II. Aerobic Archaea and Components of Electron Transport	3
III. Auxiliary Redox Factors	4
IV. Is Complex-I Present in Archaea?	9
V. Archaeal Complex-II Equivalent (SQR/QFR)	11
VI. Does a $bc_1$ Complex Exist in Archaea?	12
VII. Respiratory Chains and Supercomplexes	18
VIII. Regulatory Adaptations	24
IX. Are All Archaeal Heme/Cu-Oxidases Proton Pumps?	25
X. Conclusions and Perspectives	26
Acknowledgments	27
References	28
<b>2 Aerobic Respiration in the Gram-Positive Bacteria</b>	<b>35–62</b>
<i>Nobuhito Sone, Cecilia Hägerhäll and Junshi Sakamoto</i>	
Summary	36
I. Overview	36
II. Thermophilic <i>Bacillus</i>	38
III. <i>Bacillus subtilis</i>	46
IV. Alkaliphilic <i>Bacillus</i>	48
V. <i>Corynebacterium glutamicum</i> and Other High G+C Gram-Positive Bacteria	50
VI. Molecular Evolution of the Respiration of the Gram-Positives	54
VII. Concluding Remarks	57
References	57
<b>3 Respiratory Electron Transport in <i>Helicobacter</i> and <i>Campylobacter</i></b>	<b>63–80</b>
<i>Jonathan D. Myers and David J. Kelly</i>	
Summary	64
I. Introduction	64
II. Characteristics and Pathogenicity of <i>Campylobacter jejuni</i> and <i>Helicobacter pylori</i>	64

	III. Microaerophily	65
	IV. Electron Transport Chains	66
	V. Conclusions	76
	Acknowledgments	77
	References	77
<b>4</b>	<b>Respiratory Chains in Acetic Acid Bacteria: Membrane-bound Periplasmic Sugar and Alcohol Respirations</b>	<b>81–99</b>
	<i>Kazunobu Matsushita, Hirohide Toyama and Osao Adachi</i>	
	Summary	81
	I. Introduction	82
	II. Respiratory Chains of Acetic Acid Bacteria	83
	III. Periplasmic Sugar and Alcohol Respirations	87
	IV. Physiological Function and Meanings of Sugar and Alcohol Respirations of Acetic Acid Bacteria	92
	References	97
<b>5</b>	<b>Nitrogen Fixation and Respiration: Two Processes Linked by the Energetic Demands of Nitrogenase</b>	<b>101–120</b>
	<i>Robert J. Maier</i>	
	Summary	101
	I. Introduction and Perspective	102
	II. Nitrogen Fixation and Oxygen Tolerance	103
	III. The N <sub>2</sub> -fixing Rhizobium-legume Symbiosis	104
	IV. The FeSII Protein and Conformational Protection	111
	V. Other O <sub>2</sub> Protection Mechanisms	114
	References	117
<b>6</b>	<b>The Oxidation of Ammonia as an Energy Source in Bacteria</b>	<b>121–147</b>
	<i>Alan B. Hooper, David Arciero, David Bergmann and Michael P. Hendrich</i>	
	Summary	122
	I. Introduction: Metabolism of <i>Nitrosomonas</i>	122
	II. Summary of the Oxidative Pathways: Ammonia Monooxygenase, Hydroxylamine Oxidoreductase and the Passage of Electrons to Ubiquinone	123
	III. Hydroxylamine Oxidoreductase	129
	IV. Transfer of Electrons from HAO to Ubiquinone	136
	V. Speculation on the Evolution of the Hydroxylamine-Oxidizing System	137
	VI. Enzymology of Ammonia Monooxygenase	140
	VII. Anaerobic Respiration by Autotrophic Nitrifiers	142
	VIII. Anaerobic Oxidation of Ammonia (ANAMMOX)	143
	IX. Heterotrophic Nitrification	143
	Acknowledgments	144
	References	144

<b>7</b>	<b>Respiration in Methanotrophs</b>	<b>149–168</b>
	<i>Alan A. DiSpirito, Ryan C. Kunz, Don-Won Choi and James A. Zahn</i>	
	Summary	150
	I. Introduction	150
	II. Oxidative Enzymes	151
	III. Respiratory Components	155
	IV. Respiratory Chains	161
	Acknowledgments	164
	References	164
<b>8</b>	<b>The Enzymes and Bioenergetics of Bacterial Nitrate, Nitrite, Nitric Oxide and Nitrous Oxide Respiration</b>	<b>169–206</b>
	<i>Stuart J. Ferguson and David J. Richardson</i>	
	Summary	170
	I. Introduction	170
	II. Respiratory Nitrate Reductases	174
	III. Respiratory Nitrite Reductases	182
	IV. Nitric Oxide Reductases (Nor)	195
	V. Nitrous Oxide Reductase	199
	VI. Concluding Remarks	201
	Acknowledgments	201
	References	201
<b>9</b>	<b>Fe(II) Oxidation by <i>Thiobacillus ferrooxidans</i>: The Role of the Cytochrome c Oxidase in Energy Coupling</b>	<b>207–215</b>
	<i>W. John Ingledew</i>	
	Summary	207
	I. Introduction	207
	II. Energy Conservation in Fe(II) Oxidizing <i>Thiobacillus ferrooxidans</i>	208
	III. The Respiratory Chain Components	210
	IV. Concluding Remarks	214
	References	215
<b>10</b>	<b>Sulfur Respiration</b>	<b>217–232</b>
	<i>Frank Löhr, Heinz Rüterjans, Roland Gross, Jörg Simon and Achim Kröger</i>	
	Summary	217
	I. Introduction	218
	II. Polysulfide as Intermediate in Sulfur Respiration	218
	III. Polysulfide Respiration in <i>W. succinogenes</i>	219
	Acknowledgments	230
	References	230

<b>11 Hydrogen Respiration</b>	<b>233–260</b>
<i>Paulette M. Vignais, John C. Willison and Annette Colbeau</i>	
Summary	233
I. Introduction	234
II. Diversity of Hydrogenases	235
III. Physiological Roles of Respiratory Hydrogenases	243
IV. Regulation of Hydrogenase Gene Expression	247
V. Conclusions and Perspectives	253
Acknowledgments	254
References	254
<b>12 Cyanobacterial Respiration</b>	<b>261–278</b>
<i>Georg Schmetterer and Dietmar Pils</i>	
Summary	262
I. Introduction	262
II. Components of Cyanobacterial Respiratory Chains	264
III. Interaction between Respiration and Photosynthesis	276
Acknowledgments	276
References	276
<b>13 Interactions Between Photosynthesis and Respiration in Facultative Anoxygenic Phototrophs</b>	<b>279–295</b>
<i>André Vermeglio, Roberto Borghese and Davide Zannoni</i>	
Summary	279
I. Introduction	280
II. Modes of Interaction Between Photosynthetic and Respiratory Activities	283
III. Modes of Interaction Between Aerobic and Anaerobic Respiratory Activities	285
IV. Heterogeneity and Lack of Thermodynamic Equilibrium between Redox Components	285
V. Genetic Regulation	287
VI. Conclusions	291
Acknowledgments	292
References	292
