Contents

Editorial	v
Contents	xi
Preface	xv
Author Index	xix
1 Regulation of Respiration In Vivo	1–15
<i>Hans Lambers, Sharon A. Robinson and Miquel Ribas-Carbo</i>	
I. Introduction	2
II. General Characteristics of the Respiratory System	2
III. The Ecophysiological Function of the Alternative Pathway	8
IV. Concluding Remarks	12
Acknowledgments	12
References	12
2 Calorespirometry in Plant Biology	17–30
<i>Lee D. Hansen, Richard S. Criddle and Bruce N. Smith</i>	
Summary	17
I. Introduction	18
II. Methods for Calorespirometry Studies, Including an Illustrative Example	19
III. Plant Growth Model	22
IV. Difficulties Encountered in Developing and Applying Calorespirometric Methods	26
V. Applications of Calorespirometry and Calorimetry	27
Acknowledgments	29
References	29
3 The Application of the Oxygen-Isotope Technique to Assess Respiratory Pathway Partitioning	31–42
<i>Miquel Ribas-Carbo, Sharon A. Robinson and Larry Giles</i>	
Summary	31
I. Introduction	32
II. Theoretical Background	32
III. Design Advances	36
IV. Measurements Using the Isotopic Technique	40
V. Future Directions	40
References	41
4 Respiration in Photosynthetic Cells: Gas Exchange Components, Interactions with Photorespiration and the Operation of Mitochondria in the Light	43–61
Vaughan Hurry, Abir U. Igamberdiev, Olav Keerberg, Tiit Pärnik, Owen K. Atkin, Joana Zaragoza-Castells and Per Gardeström	

	Summary	44
	I. Introduction	44
	II. Leaf Gas Exchange Components	45
	III. Respiratory and Photorespiratory Decarboxylations in the Light	46
	IV. Availability of Substrates for Cellular Decarboxylations	49
	V. Metabolic Fluxes in Plant Mitochondria in the Light	51
	VI. Change of Mitochondrial Electron Transport in the Light	52
	VIII. Operation of the Tricarboxylic Acid (TCA) Cycle in the Light	55
	IX. Conclusion	58
	Acknowledgments	58
	References	58
5	Effects of Light Intensity and Carbohydrate Status on Leaf and Root Respiration	63–83
	<i>Ko Noguchi</i>	
	Summary	63
	I. Introduction	64
	II. Relationship between Leaf Respiration and Carbohydrate Status	65
	III. Relationship between Root Respiration and Carbohydrate Status	71
	IV. Relationship between Light Intensity and Respiration	75
	V. Concluding Remarks	79
	References	80
6	The Effects of Water Stress on Plant Respiration	85–94
	<i>Jaume Flexas, Jeroni Galmes, Miquel Ribas-Carbo and Hipólito Medrano</i>	
	Summary	85
	I. Introduction	86
	II. The Effects of Water Stress on Respiration Rates of Different Plant Organs	86
	III. The Relationship between Leaf Respiration and Relative Water Content	87
	IV. Possible Causes for the Biphaseic Response of Respiration to Relative Water Content	89
	VI. Concluding Remarks	91
	References	93
7	Response of Plant Respiration to Changes in Temperature: Mechanisms and Consequences of Variations in Q_{10} Values and Acclimation	95–135
	<i>Owen K. Atkin, Dan Bruhn and Mark G. Tjoelker</i>	
	Summary	96
	I. Introduction	97
	II. Short-term Changes in Temperature	99
	III. Mechanisms Responsible for Variation in the Q_{10} of Respiration	108
	IV. Long-term Changes in Temperature: Acclimation	115
	V. Distinguishing Between Two Types of Acclimation	122
	VI. Impacts of Variations in the Q_{10} and Acclimation	124
	VII. Concluding Statements	129
	References	129

8	Oxygen Transport, Respiration, and Anaerobic Carbohydrate Catabolism in Roots in Flooded Soils	137–158
	<i>Timothy D. Colmer and Hank Greenway</i>	
	Summary	137
	I. Introduction	138
	II. Soils with Low, But Not Zero, O ₂	140
	III. 'Avoidance' of Anoxia: Internal Aeration in Plants	141
	IV. Anoxia Tolerance in Plants	148
	V. Effects of High Partial Pressures of CO ₂ (P _{CO₂}) in Flooded Soils on Respiration	152
	VI. Conclusions	153
	Acknowledgments	154
	References	154
9	Effects of Soil pH and Aluminum on Plant Respiration	159–176
	<i>Rakesh Minocha and Subhash C. Minocha</i>	
	Summary	159
	I. Introduction	160
	II. Relationship Between External (Soil and Apoplast) and Internal (Symplast) pH	160
	III. Soil pH and Respiration	161
	IV. Interactions Among Soil pH, Aluminum and Respiration	163
	V. Conclusions and Perspectives	171
	Acknowledgments	171
	References	171
10	Understanding Plant Respiration: Separating Respiratory Components versus a Process-Based Approach	177–194
	<i>Tjeerd J. Bouma</i>	
	Summary	177
	I. Introduction	178
	II. Basic Equations Used to Define Respiratory Components	179
	III. Model Approaches Used to Define Respiratory Components	180
	IV. Methods Used to Define Respiratory Components	182
	V. Relations with Environmental Conditions	188
	VI. Future Research Directions	190
	Acknowledgments	191
	References	191
11	Respiratory/Carbon Costs of Symbiotic Nitrogen Fixation in Legumes	195–205
	<i>Frank R. Minchin and John F. Witty</i>	
	Summary	195
	I. Introduction	196
	II. Respiratory/Carbon Costs of Nitrogen Fixation	196
	III. Implications of High Carbon Costs	201
	References	202

12	Respiratory Costs of Mycorrhizal Associations	207–224
	<i>David R. Bryla and David M. Eissenstat</i>	
	Summary	207
	I. Introduction	208
	II. Total Respiratory Costs	209
	III. Components of Mycorrhizal Respiration	214
	IV. Other Respiratory Costs	218
	V. Conclusions	219
	Acknowledgments	219
	References	219
13	Integrated Effects of Atmospheric CO₂ Concentration on Plant and Ecosystem Respiration	225–240
	<i>Miguel A. González-Meler and Lina Taneva</i>	
	Summary	225
	I. Introduction: Respiration and the Carbon Cycle	226
	II. Effects of CO ₂ on Respiration	226
	III. Growth Consequences of the Effects of [CO ₂] on Respiration: A Case Study	232
	IV. Integrated Effects of Elevated [CO ₂] on Respiration at the Ecosystem Level	233
	V. Conclusions	236
	Acknowledgments	236
	References	236
