Contents

Preface	xiii
Color Plates	CP-1
1 Molecular Evolution and Taxonomy of the Cyanobacteria	1–25
<i>Annick Wilmotte</i>	
Summary	2
I. Introduction	2
II. Guidelines to the Taxonomy of the Cyanobacteria	4
III. Fossil Record of the Cyanobacteria	5
IV. Results of Chemotaxonomic Studies	5
V. Results of Macromolecular Methods	7
VI. Conclusion	21
Acknowledgments	21
References	22
2 The Oceanic Cyanobacterial Picoplankton	27–48
<i>Noel G. Carr and Nicholas H. Mann</i>	
Summary	27
I. Introduction	28
II. Macromolecular composition	30
III. Phycobiliproteins	31
IV. Plasmids	33
V. Phages	33
VI. Transcription	35
VII. Translation	36
VIII. Nutrition	37
IX. Adaptive Responses	43
Acknowledgment	44
References	45
3 Prochlorophytes: The 'Other' Cyanobacteria?	49–64
<i>Hans C. P. Matthijs, Georg W. M. van der Staay and Luuc R. Mur</i>	
Summary	49
I. Prochlorophytes and Chloroplast Ancestry	50
II. Other Non-phylogenetically Directed Studies	55
III. Concluding Remarks	62
References	62
4 Molecular Biology of Cyanelles	65–89
<i>Wolfgang Löffelhardt and Hans J. Bohnert</i>	
Summary	66
I. Introduction	66
II. Cyanelle Wall Biosynthesis and Structure	68
III. Molecular Genetics	69
IV. Protein Transport	79
V. Phylogenetic Analyses	81
VI. Conclusions	82
Acknowledgments	84
References	84

5	Chloroplast Origins and Evolution	91–118
	<i>Susan E. Douglas</i>	
	Summary	91
	I. Introduction	92
	II. The Prokaryotic Ancestry of Plastids and Their Subsequent Evolution	93
	III. Secondary Endosymbiosis in Plastid Evolution	108
	IV. Conclusions and Future Prospects	111
	Acknowledgments	111
	References	112
6	Supramolecular Membrane Organization	119–138
	<i>Elisabeth Gantt</i>	
	Summary	119
	I. Introduction	120
	II. Localization of Intrinsic Membrane Proteins and Enzymes	121
	III. Future Focus	134
	Acknowledgments	135
	References	135
7	Phycobilisome and Phycobiliprotein Structures	139–216
	<i>Walter A. Sidler</i>	
	Summary	140
	I. Introduction	141
	II. Phycobilisomes	143
	III. Phycobiliproteins Constituting the Phycobilisome Core	152
	IV. Phycobiliproteins Constituting the Rod Elements of PBS	162
	V. Linker Polypeptides, the Skeleton of the PBS	191
	VI. Organization of the Genes Encoding the Phycobilisome Elements	199
	Acknowledgments	205
	References	205
8	The Use of Cyanobacteria in the Study of the Structure and Function of Photosystem II	217–257
	<i>Bridgette A. Barry, Renee J. Boerner and Julio C. de Paula</i>	
	Summary	218
	I. Introduction	218
	II. A Comparison of the Biochemical Properties of Cyanobacterial and Higher Plant Photosystem II	219
	III. Site-Directed Mutagenesis Studies of the Donor Side of Photosystem II	231
	IV. Biophysical Studies of Cyanobacterial Photosystem II	239
	V. Concluding Remarks	247
	References	247
9	The Cytochrome b_6f Complex	259–317
	<i>Toivo Kallas</i>	
	Summary	259
	I. Introduction	260
	II. Role of the Cytochrome b_6f Complex in Cyanobacteria	261
	III. Relation to Quinol-Cytochrome c Oxidases in Chloroplasts, Mitochondria, and Other Bacteria	261
	IV. Polypeptides, Redox Centers, Substrate Binding Sites, and Subunit Topology	264
	V. Electron and Proton Transfer Pathways	280
	VI. Three-Dimensional Structure and Biogenesis	286

	VII. Genetics and Mutational Analysis	289
	VIII. Unresolved Questions and Perspective	303
	Acknowledgments	304
	References	304
10	Photosystem I in Cyanobacteria	319–360
	<i>John H. Golbeck</i>	
	Summary	320
	I. Introduction	320
	II. Unifying Principles	321
	III. Architecture of Photosystem I	323
	IV. Integral Polypeptides	329
	V. Peripheral Polypeptides	343
	Acknowledgments	354
	References	354
11	The F-type ATPase in Cyanobacteria: Pivotal Point in the Evolution of a Universal Enzyme	361–380
	<i>Wayne D. Frasch</i>	
	Summary	361
	I. Introduction	362
	II. Organization of Subunits	363
	III. Gene Organization	364
	IV. Mechanism of ATP Synthesis	366
	V. Characteristics of the Metal-Nucleotide Binding Sites	369
	VI. Location of the Metal-Nucleotide Binding Site on the β subunit—the Catalytic Site	369
	VI. Location of the Noncatalytic Metal-Nucleotide Binding Site	372
	VII. Model of the Metal-Nucleotide Binding Sites of CF1	373
	VIII. Regulation of Catalytic Activity	373
	Acknowledgments	376
	References	376
12	Soluble Electron Transfer Catalysts of Cyanobacteria	381–407
	<i>Larry Z. Morand, R. Holland Cheng, David W. Krogmann and Kwok Ki Ho</i>	
	Summary	382
	I. Ferredoxin	382
	II. Flavodoxin	387
	III. Ferredoxin NADP ⁺ Reductase (FNR)	389
	IV. Plastocyanin	392
	V. Cytochrome c_6	394
	VI. Low-Potential Cytochrome c	396
	VII. Hydrogenase	398
	References	402
13	Cyanobacterial Respiration	409–435
	<i>G. Schmetterer</i>	
	Summary	409
	I. Introduction	410
	II. Primary Electron Donors to the Respiratory Electron Transport Chain	412
	III. Primary Oxidoreductases	415
	IV. Quinone Pool	420
	V. Cytochrome b_6f complex	422
	VI. Peripheral Intermediate Electron Carriers	423

	VII. Terminal Oxidases	426
	VIII. Conclusion	428
	Acknowledgments	429
	References	429
14	The Biochemistry and Molecular Regulation of Carbon Dioxide Metabolism in Cyanobacteria	437–467
	<i>F. Robert Tabita</i>	
	Summary	437
	I. Introduction	438
	II. Pathways of Carbon Dioxide Metabolism	438
	III. Enzymes of CO ₂ Fixation: Structure, Function, and Regulation of Activity	439
	IV. Organization of Reductive Pentose Phosphate Cycle Genes	457
	V. Regulation of Expression of Reductive Pentose Phosphate Cycle Genes	460
	VI. Conclusion	462
	Acknowledgments	462
	References	462
15	Physiological and Molecular Studies on the Response of Cyanobacteria to Changes in the Ambient Inorganic Carbon Concentration	469–485
	<i>Aaron Kaplan, Rakefet Schwarz, Judy Lieman-Hurwitz, Michal Ronen-Tarazi and Leonora Reinhold</i>	
	Summary	469
	I. Introduction	469
	II. Adaptation to Changing Ambient CO ₂ Concentration and CO ₂ -Dependent Gene Expression	471
	III. Mechanism of Inorganic Carbon Uptake	473
	IV. Role of Carboxysomes	477
	V. Types of CO ₂ Concentration-Dependent Mutants and the Relevant Genomic Lesions	480
	VI. Concluding remarks	482
	Acknowledgments	483
	References	483
16	Assimilatory Nitrogen Metabolism and Its Regulation	487–517
	<i>Enrique Flores and Antonia Herrero</i>	
	Summary	488
	I. Introduction	488
	II. Nitrogen Fixation	489
	III. Nitrate and Nitrite Assimilation	497
	IV. Assimilation of Organic Nitrogen	502
	V. Assimilation of Ammonium	504
	VI. Distribution of Assimilated Nitrogen	509
	VII. Global Nitrogen Control	510
	Acknowledgments	511
	References	511
17	Biosynthesis of Cyanobacterial Tetrapyrrole Pigments: Hemes, Chlorophylls, and Phycobilins	519–558
	<i>Samuel I. Beale</i>	
	Summary	520
	I. Introduction	520
	II. Tetrapyrrole Precursor Biosynthesis	521

	III. The Pathway from PBG to Uroporphyrinogen III	528
	IV. Steps Leading to Siroheme and Corrins	529
	V. Conversion of Uroporphyrinogen III to Protoporphyrin IX	530
	VI. The Fe Branch	531
	VII. The Mg Branch	538
	Note Added in Proof	547
	Acknowledgments	548
	References	548
18	Carotenoids in Cyanobacteria	559–579
	<i>Joseph Hirschberg and Daniel Chamovitz</i>	
	Summary	559
	I. Introduction	560
	II. Functions of Carotenoids	560
	III. Analytical Methods	562
	IV. Carotenoid Composition in Cyanobacteria	564
	V. Carotenoproteins: The Cellular Location of Carotenoids	565
	VI. Biosynthesis of Carotenoids	567
	VII. Molecular Characterization of Carotenoid Biosynthesis	571
	VIII. Inhibitors of Carotenoid Biosynthesis	572
	IX. Regulation of Carotenoid Biosynthesis and Accumulation	574
	References	575
19	Genetic Analysis of Cyanobacteria	581–611
	<i>Teresa Thiel</i>	
	Summary	582
	I. Introduction	582
	II. Gene Transfer	582
	III. Mutagenesis	592
	IV. Reporter Systems	596
	V. DNA Elements	598
	VI. Mapping	599
	VII. Expression of Foreign Genes in Cyanobacteria	601
	VIII. Developing a Genetic System: Practical Problems and Possible Solutions	604
	Acknowledgments	606
	References	606
20	The Transcription Apparatus and the Regulation of Transcription Initiation	613–639
	<i>Stephanie E. Curtis and James A. Martin</i>	
	Summary	614
	I. Introduction	614
	II. Transcription in <i>E. coli</i> : Paradigms for Eubacteria	614
	III. Transcription in Cyanobacteria	619
	Acknowledgments	635
	References	635
21	The Responses of Cyanobacteria to Environmental Conditions: Light and Nutrients	641–675
	<i>Arthur R. Grossman, Michael R. Schaefer, Gisela G. Chiang and Jackie L. Collier</i>	
	Summary	641
	I. PBS Structure	641
	II. Chromatic Adaptation	643

	III. The Responses of Cyanobacteria to Nutrient Deficiency	654
	IV. Concluding Remarks	668
	Acknowledgments	668
	References	668
22	Short-term and Long-term Adaptation of the Photosynthetic Apparatus: Homeostatic Properties of Thylakoids	677-692
	<i>Yoshihiko Fujita, Akio Murakami, Katsunori Aizawa and Kaori Ohki</i>	
	Summary	677
	I. Introduction	678
	II. Short-term Adaptation: The State Transition	679
	III. Long-Term Adaptation: Regulation of PS I:PS II Stoichiometry	683
	IV. Relationship Between Short-Term and Long-Term Adaptation	689
	Acknowledgments	690
	References	690
23	Light-Responsive Gene Expression and the Biochemistry of the Photosystem II Reaction Center	693-714
	<i>Susan S. Golden</i>	
	Summary	693
	I. PS II: Agent and Target of Environmental Variation	694
	II. PS II Genes of Cyanobacteria	694
	III. Response of <i>psbA</i> Genes to Changes in Light Intensity	699
	IV. Response of <i>psbD</i> Genes to Changes in Light Intensity	704
	V. Functional Significance of Light-Responsive Regulation	705
	VI. Light Quality and <i>psbA</i> Expression	706
	VII. Light-Regulated Gene Expression and the Biochemistry of PS II Proteins	706
	VIII. Cyanobacteria as Models for Studying Photoinhibition Mechanisms in vivo	708
	IX. Future directions	710
	Acknowledgments	710
	References	711
24	Thioredoxins in Cyanobacteria: Structure and Redox Regulation of Enzyme Activity	715-729
	<i>Florence K. Gleason</i>	
	Summary	715
	I. Introduction	716
	II. Structure of Cyanobacterial Thioredoxins	720
	III. Reduction of Thioredoxins	722
	IV. Functions of Thioredoxins in Cyanobacteria	723
	References	726
25	Iron Deprivation: Physiology and Gene Regulation	731-750
	<i>Neil A. Straus</i>	
	Summary	731
	I. Introduction	732
	II. Iron in Photosynthetic Electron Transport	732
	III. Responses to Iron Deprivation	734
	IV. The Control of Gene Expression by Iron	743
	Acknowledgments	745
	References	747

26	The Cyanobacterial Heat-Shock Response and the Molecular Chaperones	751–767
	<i>Robert Webb and Louis A. Sherman</i>	
	Summary	751
	I. Background	752
	II. Functional Aspects, Protein Folding and Localization	757
	III. Molecular Chaperones of the Cyanobacteria	762
	IV. Summary and Future Directions	764
	References	765
27	Heterocyst Metabolism and Development	769–823
	<i>C. Peter Wolk, Anneliese Ernst and Jeff Elhai</i>	
	Summary	770
	I. What is a Heterocyst?	770
	II. Genetic Tools	773
	III. Metabolism of Mature Heterocysts	774
	IV. The Differentiation Process	793
	V. Pattern Formation and Perpetuation	803
	VI. Relationship of Diverse Differentiation Processes in Cyanobacteria	810
	Acknowledgments	811
	References	811
28	Differentiation of Hormogonia and Relationships with Other Biological Processes	825–842
	<i>Nicole Tandeau de Marsac</i>	
	Summary	825
	I. Introduction	826
	II. Occurrence of Hormogonia Among Cyanobacteria	826
	III. Factors Modulating the Production of Hormogonia	829
	IV. Morphological, Ultrastructural, Biochemical and Genetic Changes During the Differentiation of Hormogonia	830
	V. Relationships of Hormogonium Differentiation with Other Biological Processes	833
	VI. Hormogonia and Symbiosis	837
	VII. Further Prospects	838
	Acknowledgments	839
