Preface

xxiii

Part I: Taxonomy, Physiology and Ecology

1	Taxonomy and Physiology of Phototrophic Purple Bacteria and Green Sulfur Bacteria	1–15
	<i>Johannes F. Imhoff</i>	
	Summary	1
	I. Introduction	1
	II. General Aspects of Taxonomy	3
	III. General Aspects of Physiology	4
	IV. Description of the Groups	5
	References	11
2	Taxonomy, Physiology and Ecology of Heliobacteria	17–30
	<i>Michael T. Madigan and John G. Ormerod</i>	
	Summary	17
	I. Introduction	18
	II. Taxonomy of Heliobacteria	19
	III. Physiology	23
	IV. Ecology and Isolation of Heliobacteria	27
	Acknowledgments	29
	References	29
3	Taxonomy and Physiology of Filamentous Anoxygenic Phototrophs	31–47
	<i>Beverly K. Pierson and Richard W. Castenholz</i>	
	Summary	32
	I. Introduction	32
	II. Taxonomy and Phylogeny	33
	III. Physiology	36
	Acknowledgment	44
	References	44
4	Ecology of Phototrophic Sulfur Bacteria	49–85
	<i>Hans Van Gernerden and Jordi Mas</i>	
	Summary	50
	I. Introduction	50
	II. Characteristic and Vertical Structure of the Habitats	50

	III. Distribution and Abundance of Phototrophic Sulfur Bacteria in Nature	53
	IV. Contribution of Phototrophic Sulfur Bacteria to Primary Production	56
	V. Growth Rates in Nature	58
	VI. Loss Processes	60
	VII. Growth Balance, Maximum Biomass and Production in Phototrophic Communities	63
	VIII. Environmental Factors Affecting Growth and Survival of Phototrophic Sulfur Bacteria	63
	IX. Case Studies	72
	X. Concluding Remarks	78
	Acknowledgments	79
	References	79
5	Ecology of Thermophilic Anoxygenic Phototrophs	87–103
	<i>Richard W. Castenholz and Beverly K. Pierson</i>	
	Summary	87
	I. Introduction	88
	II. Chemical and Geographical Diversity of Thermal Habitats	93
	III. Principal Habitats of Thermophilic Anoxygenic Phototrophs and the Environmental Requirements: Case Studies	94
	References	101
6	Aerobic Anoxygenic Phototrophs	105–122
	<i>Keizo Shimada</i>	
	Summary	105
	I. Introduction	106
	II. Habitats and Culture	106
	III. Photosynthetic Apparatus	108
	IV. Pigments and Other Components	111
	V. Photosynthetic Activity and Electron Transfer System	113
	VI. Regulation of Pigment Synthesis	116
	VII. Evolution and Taxonomy	118
	Acknowledgments	120
	References	120
7	Bacteriochlorophyll-Containing <i>Rhizobium</i> Species	123–136
	<i>Darrell E. Fleischman, William R. Evans and Iain M. Miller</i>	
	Summary	124
	I. Introduction	124
	II. Relationship of Bacteriochlorophyll-containing <i>Rhizobium</i> Species to Other Bacteria	126
	III. Characteristics of <i>Aeschynomene Rhizobium</i> BTAi 1 Grown <i>ex planta</i>	127
	IV. Characteristics of Photosynthetic <i>Rhizobium</i> in the Symbiotic System	131
	V. Conclusions	134
	Acknowledgments	135
	References	135

Part II: Molecular Structure and Biosynthesis of Pigments and Cofactors

8	Biosynthesis and Structures of the Bacteriochlorophylls	137–151
	<i>Mathias O. Senge and Kevin M. Smith</i>	
	Summary	137
	I. Introduction	137
	II. Structural Chemistry of the Bacteriochlorophylls	138
	III. Biosynthesis of the Bacteriochlorophylls	141
	IV. Degradation of the Bacteriochlorophylls	149
	Acknowledgments	149
	References	149
9	Biosynthesis and Structures of Porphyrins and Hemes	153–177
	<i>Samuel I. Beale</i>	
	Summary	153
	I. Introduction	154
	II. The Early Common Steps	154
	Acknowledgments	170
	References	170
10	Lipids, Quinones and Fatty Acids of Anoxygenic Phototrophic Bacteria	179–205
	<i>Johannes M. Imhoff and Ursula Bias-Imhoff</i>	
	Summary	180
	I. Introduction	180
	II. Polar Lipids and Fatty Acids	183
	III. Apolar Lipids	198
	References	201

Part III. Membrane and Cell Wall Architecture and Organization

11	Anoxygenic Phototrophic Bacteria: Model Organisms for Studies on Cell Wall Macromolecules	207–230
	<i>Jürgen Weckesser, Hubert Mayer and Georg Schulz</i>	
	Summary	208
	I. Introduction	208
	II. Definition, Function, and Constituents of the Cell Wall	208
	III. Phylogenetic Relevance of Cell Wall Constituents	209
	IV. Structure of Lipopolysaccharide (LPS)	217
	V. Contribution of the Lipopolysaccharides (LPS) of Purple Bacteria to Endotoxin Research	219
	VI. Porin	221
	VII. External Envelope Layers	222
	VIII. Concluding Remarks	223
	References	226

12	Structure, Molecular Organization, and Biosynthesis of Membranes of Purple Bacteria	231–257
	<i>Gerhart Drews and Jochen R. Golecki</i>	
	Summary	231
	I. Introduction	232
	II. Structure and Supramolecular Organization of Cytoplasmic and Intracytoplasmic Membranes	233
	III. Biosynthesis of Membranes and the Assembly of the Functional Complexes of the Photosynthetic Apparatus	242
	Acknowledgments	251
	References	251
13	Membranes and Chlorosomes of Green Bacteria: Structure, Composition and Development	259–278
	<i>Jürgen Oelze and Jochen R. Golecki</i>	
	Summary	259
	I. Introduction	260
	II. Ultrastructure	260
	III. Chemical Composition	264
	IV. Supramolecular Organization of Chlorosomes	267
	V. Development of the Photosynthetic Apparatus	268
	VI. Open Questions	274
	Acknowledgments	275
	References	275
14	Organization of Electron Transfer Components and Supercomplexes	279–295
	<i>André Verméglio, Pierre Joliot and Anne Joliot</i>	
	Summary	279
	I. Introduction	280
	II. The Versatile Metabolism of the Rhodospirillaceae	281
	III. Regulation of the Biosynthesis of the Electron Transfer Components	282
	IV. Short Term Interactions Between Photosynthetic and Respiratory Activities	284
	V. Organization of the Electron Carrier Proteins into Supercomplexes	287
	References	292

Part IV: Antenna Structure and Function

15	Theory of Electronic Energy Transfer	297–313
	<i>Walter S. Struve</i>	
	Summary	297
	I. Introduction	298
	II. The Weak Coupling Limit	298
	III. Unified Theory for Energy Transfer	303
	IV. Temperature Dependence of Energy Transfer	309
	Acknowledgments	312
	References	312

16	Structure and Organization of Purple Bacterial Antenna Complexes	315–348
	<i>Herbert Zuber and Richard J. Cogdell</i>	
	Summary	316
	I. Structure and Function of Antenna Complexes from Purple Bacteria	316
	II. Structure and Function of Antenna Polypeptides from Purple Bacteria. General Aspects	320
	III. Amino Acid Sequences (Primary Structure) of Antenna Polypeptides. Sequence Homologies, Structural and Functional Features	321
	IV. Structural and Functional Variability of the Antenna Polypeptides and Pigments within the Antenna Complex	328
	V. Possible Structural Organization of Polypeptides and BChl Molecules in the Antenna Complex Derived from Primary Structure Data (Primary Structure Models): Considerations on the Three-Dimensional Structure of Antenna Complexes	331
	Note Added in Proof	342
	Acknowledgments	344
	References	344
17	Kinetics of Excitation Transfer and Trapping in Purple Bacteria	349–372
	<i>Villy Sundström and Rienk van Grondelle</i>	
	Summary	349
	I. Introduction	350
	II. Pigment-Protein Organization in LH1 and LH2	350
	III. Spectroscopy of the LH1 and LH2 Light-Harvesting Antennae	352
	IV. Energy Transfer in LH2-Less Purple Bacteria	356
	V. Energy Transfer in LH2-Containing Purple Bacteria	361
	VI. Energy Transfer in Isolated Light-Harvesting Complexes and Mutants	363
	References	366
18	Singlet Energy Transfer from Carotenoids to Bacteriochlorophylls	373–384
	<i>Harry A. Frank and Ronald L. Christensen</i>	
	Summary	373
	I. Introduction	374
	II. The Electronic Structure of Carotenoid Excited States	374
	III. The Dynamics of Carotenoid Excited States	378
	IV. Implications for Energy Transfer	380
	Acknowledgments	381
	References	382
19	Coupling of Antennas to Reaction Centers	385–398
	<i>Arvi Freiberg</i>	
	Summary	385
	I. Introduction	386
	II. The Concept of a Photosynthetic Unit	386
	III. Structure and Organization of Real Photosynthetic Systems	387
	IV. Trapping of Energy by the Reaction Center	388
	V. Detrapping of Excitation Energy from the Reaction Center	391
	VI. Pigment-Protein Couplings According to High Hydrostatic Pressure Studies	393
	VII. Concluding Remarks	395
	Acknowledgments	396
	References	396

20	Antenna Complexes from Green Photosynthetic Bacteria	399–435
	<i>Robert E. Blankenship, John M. Olson and Mette Miller</i>	
	Summary	400
	I. Introduction	400
	II. Chlorosome Composition	401
	III. In vitro Aggregates of Chlorosome Chlorophylls	408
	IV. Spectroscopic Probes of Chlorosome Structure	410
	V. Structural Models for Pigment and Protein Organization in Chlorosomes	413
	VI. Kinetics and Pathways of Energy Transfer in Chlorosomes	418
	VII. The Fenna-Matthews-Olson (FMO) Bacteriochlorophyll <i>a</i> Protein	422
	VIII. Redox Modulation of Energy Transfer in Green Photosynthetic Bacteria	426
	IX. Evolutionary Considerations	427
	Acknowledgments	428
	References	428
21	Structure-Function Relationships in Core Light-Harvesting Complexes (LHI) As Determined by Characterization of the Structural Subunit and by Reconstitution Experiments	437–471
	<i>Paul A. Loach and Pamela S. Parkes-Loach</i>	
	Summary	438
	I. Introduction	439
	II. The Structural Subunit of LHI	440
	III. Reconstitution of Subunit Complexes and LHI from Separately-Isolated Components	449
	IV. Probing the BChl Binding Site by Reconstitution with BChl Analogs	452
	V. Reconstitution of Car to Form Wild-Type LHI with BChl <i>a</i> and Polypeptides of <i>Rb. sphaeroides</i> and <i>Rs. rubrum</i>	454
	VI. Reconstitution of LHI-type Complexes Using Mixed Polypeptides	456
	VII. Probing Structural Requirements for Formation of the Subunit Complex and LHI by Reconstitution with Modified Polypeptides	457
	VIII. Analysis of Stabilizing Interactions in Subunit Complexes	459
	IX. Analysis of Stabilizing Interactions in LHI	460
	X. Implications for the Structure of the Subunit Complexes	461
	XI. Minimal Structural Requirements to Form LHI	464
	XII. Interaction of LHI with RC	466
	Acknowledgments	467
	References	467
22	Genetic Manipulation of the Antenna Complexes of Purple Bacteria	473–501
	<i>C. Neil Hunter</i>	
	Summary	473
	I. Introduction	474
	II. The Effect of Genetic Alteration of Antennas on the Morphology of Intracytoplasmic Membranes	478
	III. The Use of LH1-Only and LH1-RC Mutants to Facilitate Biochemical and Structural Studies	478
	IV. The Use of Antenna Mutants to Simplify Spectroscopic Studies of Antenna Complexes in a Membrane Environment	480
	V. Site-Directed Mutagenesis of Bacterial Light Harvesting Complexes	487
	VI. Heterologous Expression of LH Genes in <i>Rhodobacter sphaeroides</i>	495
	VII. Concluding Remarks	495
	References	496

Part V: Reaction Center Structure, Electron and Proton Transfer Pathways

23	The Structures of Photosynthetic Reaction Centers from Purple Bacteria as Revealed by X-Ray Crystallography	503–526
	<i>C. Roy D. Lancaster, Ulrich Ermler and Hartmut Michel</i>	
	Summary	503
	I. Introduction	504
	II. Structural and Functional Overview	505
	III. Arrangement of the Cofactors	506
	IV. The Structure of the Protein Subunits	508
	V. Cofactor Conformation and Protein-Cofactor Interactions	512
	VI. The Structure of Mutant Reaction Centers	521
	VII. Conclusions	523
	References	523
24	The Pathway, Kinetics and Thermodynamics of Electron Transfer in Wild Type and Mutant Reaction Centers of Purple Nonsulfur Bacteria	527–557
	<i>Neal W. Woodbury and James P. Allen</i>	
	Summary	528
	I. Introduction	528
	II. The Reaction Center of <i>Rhodobacter sphaeroides</i>	529
	III. Reaction Center Mutants	531
	IV. The Ground State Optical Spectrum of Reaction Centers	532
	V. The Spectral and Kinetic Properties of P*	533
	VI. The State P*	538
	VII. The Product of Initial Charge Separation	540
	VIII. Electron Transfer to the Primary Quinone	542
	IX. Electron Transfer from the Primary to Secondary Quinone	543
	X. The Thermodynamics of Reaction Center Electron Transfer	543
	XI. Reaction Center Symmetry and the Direction of Electron Transfer	545
	XII. The Pathway and Mechanism of Initial Electron Transfer	547
	XIII. The Role of the Reaction Center Protein in Electron Transfer	551
	Acknowledgments	552
	References	552
25	Theoretical Analyses of Electron-Transfer Reactions	559–575
	<i>William W. Parson and Arieh Warshel</i>	
	Summary	559
	I. Introduction	560
	II. Phenomenological Descriptions of Electron-Transfer Reactions	562
	III. Microscopic Calculations of Electron-Transfer Parameters	564
	Acknowledgments	572
	References	572

26	Proton-Coupled Electron Transfer Reactions of Q_b in Reaction Centers from Photosynthetic Bacteria	577–594
	<i>M. Y. Okamura and G. Feher</i>	
	Summary	577
	I. Introduction	578
	II. Structure of the Bacterial Reaction Center Near the Q _b Site	579
	III. The Quinone Reduction Cycle	580
	IV. Properties of the Quinones	581
	V. Effects of Site-Directed Mutagenesis on Electron and Proton Transfer Rates	583
	VI. Mechanism of Proton Coupled Electron Transfer	587
	VII. Pathways for Proton Transfer	589
	Note Added in Proof	590
