

Discoveries in Photosynthesis

Edited by

Govindjee

University of Illinois at Urbana-Champaign, Urbana, Illinois, U.S.A.

J. Thomas Beatty

University of British Columbia, Vancouver, B.C., Canada

Howard Gest

Indiana University, Bloomington, Indiana, U.S.A.

and

John F. Allen

Queen Mary, University of London, London, U.K.

Contents

From the series editor	xvii–xxi
Preface	xxiii–xxvi
<i>H. Gest, J.T. Beatty, J.F. Allen and Govindjee</i>	
A personal tribute to an eminent photosynthesis researcher, Martin D. Kamen (1913–2002)	xxvii–xxviii
<i>H. Gest</i>	
Biographies of the editors	xxix–xxxi
Color plates	xxxiii–xxxviii
I. Editorials	
Celebrating the Golden Jubilee of the 1952 Conference on Photosynthesis (Gatlinburg, Tennessee, USA)	3
Celebrating the millennium – historical highlights of photosynthesis research, Part 1	5–10
<i>Govindjee and Howard Gest</i>	
Celebrating the millennium – historical highlights of photosynthesis research, Part 2	11–21
<i>Govindjee, J.T. Beatty and H. Gest</i>	
Celebrating the millennium – historical highlights of photosynthesis Research, Part 3	23–35
<i>Govindjee, J.F. Allen and J.T. Beatty</i>	
II. Overviews and Timelines	
History of the word <i>photosynthesis</i> and evolution of its definition	39–42
<i>H. Gest</i>	
In one era and out the other	43–50
<i>J. Myers</i>	
Time line of discoveries: anoxygenic photosynthesis	51–62
<i>H. Gest and R. E. Blankenship</i>	
Discoveries in oxygenic photosynthesis (1727–2003): a perspective	63–105
<i>Govindjee and D. Krogmann</i>	

III. Tributes

- 'And whose bright presence' – an appreciation of Robert Hill and his reaction** 109–112

D. A. Walker

- The contributions of James Franck to photosynthesis research: a tribute** 113–118

J. L. Rosenberg

- Hydrogen metabolism of green algae: discovery and early research – a tribute to Hans Gaffron and his coworkers** 119–129

P. H. Homann

- Samuel Ruben's contributions to research on photosynthesis and bacterial metabolism with radioactive carbon** 131–137

H. Gest

- Contributions of Henrik Lundegårdh** 139–144

A. W. D. Larkum

IV. Excitation Energy Transfer

- Photosynthetic exciton theory in the 1960s** 147–154

R. M. Pearlstein

- Excitation energy trapping in anoxygenic photosynthetic bacteria** 155–163

J. Amesz[†] and S. Neerken

- Fluorescence lifetime, yield, energy transfer and spectrum in photosynthesis, 1950–1960** 165–170

S.S. Brody

- Visualization of excitation energy transfer processes in plants and algae** 171–176

M. Mimuro

- Plastoquinone redox control of chloroplast thylakoid protein phosphorylation and distribution of excitation energy between photosystems: discovery, background, implications** 177–186

J. F. Allen

- Excitation transfer between photosynthetic units: the 1964 experiment** 187–191

P. Joliot and A. Joliot

V. Reaction Centers

- Research on photosynthetic reaction centers from 1932 to 1987** 195–203

R. K. Clayton

[†] Deceased

Chlorophyll chemistry before and after crystals of photosynthetic reaction centers	205–212
<i>J. Fajer</i>	
Electron donors and acceptors in the initial steps of photosynthesis in purple bacteria: a personal account	213–224
<i>W. W. Parson</i>	
My daily constitutional in Martinsried	225–231
<i>J. P. Allen</i>	
The two-electron gate in photosynthetic bacteria	233–236
<i>A. Verméglio</i>	
Steps on the way to building blocks, topologies, crystals and X-ray structural analysis of Photosystems I and II of water-oxidizing photosynthesis	237–259
<i>H. T. Witt</i>	
The identification of the Photosystem II reaction center: a personal story	261–268
<i>K. Satoh</i>	
The isolated Photosystem II reaction center: first attempts to directly measure the kinetics of primary charge separation	269–274
<i>M. Seibert and M. R. Wasielewski</i>	
Discovery of pheophytin function in the photosynthetic energy conversion as the primary electron acceptor of Photosystem II	275–281
<i>V. V. Klimov</i>	
Engine of life and big bang of evolution: a personal perspective	283–301
<i>J. Barber</i>	
Role of bicarbonate at the acceptor side of Photosystem II	303–310
<i>J. J. S. van Rensen</i>	
Unraveling the Photosystem I reaction center: a history, or the sum of many efforts	311–326
<i>P. Fromme and P. Mathis</i>	
Photosystem I reaction center: past and future	327–340
<i>N. Nelson and A. Ben-Shem</i>	
P430: a retrospective, 1971–2001	341–348
<i>B. Ke</i>	

VI. *Oxygen Evolution*

- Apparatus and mechanism of photosynthetic oxygen evolution: a personal perspective** 351–370
G. Renger
- Period-four oscillations of the flash-induced oxygen formation in photosynthesis** 371–378
P. Joliot
- Period four oscillations in chlorophyll *a* fluorescence** 379–382
R. Delosme and P. Joliot
- Chloride and calcium in Photosystem II: from effects to enigma** 383–389
P. H. Homann
- The bicarbonate effect, oxygen evolution, and the shadow of Otto Warburg** 391–397
A. J. Stemler
- Early indications for manganese oxidation state changes during photosynthetic oxygen production: a personal account** 399–409
T. J. Wydrzynski

VII. *Light-Harvesting and Pigment-Protein Complexes*

- Purple bacterial light-harvesting complexes: from dreams to structures** 413–419
R. J. Cogdell, H. Hashimoto and A. T. Gardiner
- The FMO protein** 421–427
J. M. Olson
- Physical separation of chlorophyll-protein complexes** 429–434
T. Ogawa
- How the chlorophyll-proteins got their names** 435–442
E. L. Camm and B. R. Green
- Phycobiliproteins and phycobilisomes: the early observations** 443–451
N. Tandeau de Marsac

VIII. *Electron Transport and ATP Synthesis*

- Discovery and characterization of electron transfer proteins in the photosynthetic bacteria** 455–470
T. E. Meyer and M. A. Cusanovich

Membrane-anchored cytochrome <i>c</i> as an electron carrier in photosynthesis and respiration: past, present and future of an unexpected discovery	471–478
<i>F. Daldal, M. Deshmukh and R. C. Prince</i>	
The Q-cycle – a personal perspective	479–499
<i>A. R. Crofts</i>	
The isolation of a functional cytochrome <i>b₆f</i> complex: from lucky encounter to rewarding experience	501–515
<i>G. Hauska</i>	
<i>Ironies</i> in photosynthetic electron transport: a personal perspective	517–529
<i>W. A. Cramer</i>	
The unfinished story of cytochrome <i>f</i>	531–542
<i>D. S. Bendall</i>	
Early research on the role of plastocyanin in photosynthesis	543–549
<i>S. Katoh</i>	
Irrungen, Wirrungen? The Mehler reaction in relation to cyclic electron transport in C3 plants	551–559
<i>U. Heber</i>	
Photophosphorylation and the chemiosmotic perspective	561–569
<i>A. T. Jagendorf</i>	
Protons, proteins and ATP	571–595
<i>W. Junge</i>	
On why thylakoids energize ATP formation using either delocalized or localized proton gradients – a Ca²⁺ mediated role in thylakoid stress responses	597–615
<i>R. A. Dilley</i>	
 IX. Techniques and Applications	
The stopped-flow method and chemical intermediates in enzyme reactions – a personal essay	619–632
<i>B. Chance</i>	
The chequered history of the development and use of simultaneous equations for the accurate determination of chlorophylls <i>a</i> and <i>b</i>	633–640
<i>R. J. Porra</i>	

The contribution of photosynthetic pigments to the development of biochemical separation methods: 1900–1980	641–649
<i>P.-Å. Albertsson</i>	
On some aspects of photosynthesis revealed by photoacoustic studies: a critical evaluation	651–663
<i>R. Delosme</i>	
The history of photosynthetic thermoluminescence	665–680
<i>I. Vass</i>	
Trails of green alga hydrogen research – from Hans Gaffron to new frontiers	681–689
<i>A. Melis and T. Happe</i>	
Engineering the chloroplast encoded proteins of <i>Chlamydomonas</i>	691–699
<i>L. Xiong and R. T. Sayre</i>	
Pictorial demonstrations of photosynthesis	701–705
<i>R. P. Hangarter and H. Gest</i>	
X. <i>Biogenesis and Membrane Architecture</i>	
Membrane biogenesis in anoxygenic photosynthetic prokaryotes	709–716
<i>G. Drews and R. A. Niederman</i>	
Chloroplast structure: from chlorophyll granules to supra-molecular architecture of thylakoid membranes	717–728
<i>L. A. Staehelin</i>	
Changing concepts about the distribution of Photosystems I and II between grana-appressed and stroma-exposed thylakoid membranes	729–736
<i>J. M. Anderson</i>	
Chloroplasts in living cells and the string-of-grana concept of chloroplast structure revisited	737–744
<i>S. G. Wildman[†] A. M. Hirsch, S. J. Kirchanski and D. Spencer</i>	
From chloroplasts to chaperones: how one thing led to another	745–755
<i>R. J. Ellis</i>	
XI. <i>Reductive and Assimilatory Processes</i>	
Acceptance of the Enrico Fermi Award by Martin Kamen (April 24, 1996)	757

[†] Deceased

‘Every dogma has its day’: a personal look at carbon metabolism in photosynthetic bacteria	761–769
<i>J. Ormerod</i>	
Research on carbon dioxide fixation in photosynthetic microorganisms (1971–present)	771–788
<i>F. R. Tabita</i>	
Nitrogen fixation by photosynthetic bacteria	789–792
<i>P. W. Ludden and G. P. Roberts</i>	
Following the path of carbon in photosynthesis: a personal story	793–813
<i>A. A. Benson</i>	
Mapping the carbon reduction cycle: a personal retrospective	815–832
<i>J. A. Bassham</i>	
Chloroplasts in envelopes: CO₂ fixation by fully functional intact chloroplasts	833–841
<i>D. A. Walker</i>	
Along the trail from Fraction I protein to Rubisco (ribulose biphosphate carboxylase-oxygenase)	843–850
<i>S. G. Wildman[†]</i>	
The discovery of Rubisco activase – yet another story of serendipity	851–858
<i>A. R. Portis Jr and M. E. Salvucci</i>	
The ferredoxin/thioredoxin system: from discovery to molecular structures and beyond	859–866
<i>B. B. Buchanan, P. Schürmann, R. A. Wolosiuk and J.-P. Jacquot</i>	
How is ferredoxin-NADP reductase involved in the NADP photoreduction of chloroplasts?	867–873
<i>M. Shin</i>	
C₄ photosynthesis: discovery and resolution	875–880
<i>M. D. Hatch</i>	
Crassulacean acid metabolism photosynthesis: ‘working the night shift’	881–893
<i>C. C. Black and C. B. Osmond</i>	
XII. Transport, Regulation and Adaptation	
Three decades in transport business: studies of metabolite transport in chloroplasts – a personal perspective	897–904
<i>H.-W. Heldt</i>	

[†] Deceased

The present model for chlororespiration <i>P. Bennoun</i>	905–909
Affixing the O to Rubisco: discovering the source of photorespiratory glycolate and its regulation <i>W. L. Ogren</i>	911–921
Linking the xanthophyll cycle with thermal energy dissipation <i>B. Demmig-Adams</i>	923–930
Photoinhibition – a historical perspective <i>N. Adir, H. Zer, S. Shochat and I. Ohad</i>	931–958
A molecular understanding of complementary chromatic adaptation <i>A.R. Grossman</i>	959–967
Anoxygenic phototrophic bacteria from extreme environments <i>M. T. Madigan</i>	969–983
Light-induced behavioral responses ('phototaxis') in prokaryotes <i>J. P. Armitage and K. J. Hellingwerf</i>	985–995
 XIII. Genetics	
The early history of the genetics of photosynthetic bacteria: a personal account <i>B. L. Marrs</i>	999–1002
Photosynthesis genes and their expression in <i>Rhodobacter sphaeroides</i> 2.4.1: a tribute to my students and associates <i>S. Kaplan</i>	1003–1016
Regulation of photosystem synthesis in <i>Rhodobacter capsulatus</i> <i>C. Bauer</i>	1017–1024
Photosynthesis research: advances through molecular biology – the beginnings, 1975–1980s and on ... <i>L. Bogorad</i> [†]	1025–1045
The three genomes of <i>Chlamydomonas</i> <i>J.-D. Rochaix</i>	1047–1055

[†] Deceased

History of chloroplast genomics	1057–1063
<i>M. Sugiura</i>	
Gene-targeted and site-directed mutagenesis of photosynthesis genes in cyanobacteria	1065–1070
<i>S. V. Shestakov</i>	
XIV. Evolution	
Thinking about the evolution of photosynthesis	1073–1086
<i>J. M. Olson and R. E. Blankenship</i>	
Evolutionary relationships among photosynthetic bacteria	1087–1097
<i>R. S. Gupta</i>	
On the natural selection and evolution of the aerobic phototrophic bacteria	1099–1104
<i>J. T. Beatty</i>	
Prochlorophyta – a matter of class distinctions	1105–1107
<i>R. A. Lewin</i>	
The archaeal concept and the world it lives in: a retrospective	1109–1120
<i>C. R. Woese</i>	
XV. Laboratories and National Perspectives	
The Laboratory of Photosynthesis and its successors at Gif-sur-Yvette, France	1123–1131
<i>Y. de Kouchkovsky</i>	
Photosynthesis and the Charles F. Kettering Research Laboratory	1133–1142
<i>L. P. Vernon</i>	
Chlorophyll isolation, structure and function: major landmarks of the early history of research in the Russian Empire and the Soviet Union	1143–1157
<i>A. A. Krasnovsky Jr</i>	
Studies of chlorophyll biosynthesis in Russia	1159–1165
<i>O. B. Belyaeva</i>	
The beginnings of research on biophysics of photosynthesis and initial contributions made by Russian scientists to its development	1167–1180
<i>A. Borisov</i>	

Photosynthesis research in Greece: a historical snapshot (1960–2001) <i>G. C. Papageorgiou</i>	1181–1187
Photosynthesis research in India: transition from yield physiology into molecular biology <i>A. S. Raghavendra, P. V. Sane and P. Mohanty</i>	1189–1204
Photosynthesis research in the People’s Republic of China <i>T.-Y. Kuang, C. Xu, L.-B. Li and Y.-K. Shen</i>	1205–1212
XVI. Retrospectives	
Celebrating forty years of the conference on ‘Photosynthetic Mechanisms of Green Plants’ at Airlie House, Virginia, led by Bessel Kok and André Jagendorf	1215–1217
A list of personal perspectives with selected quotations, along with lists of tributes, historical notes, Nobel and Kettering awards related to photosynthesis <i>Govindjee and D. W. Krogmann</i>	1219–1228
Passage of a young Indian physical chemist through the world of photosynthesis research at Urbana, Illinois, in the 1960s: a personal essay <i>A. K. Ghosh</i>	1229–1239
The conference at Airlie House in 1963 <i>H. J. Rurainski</i>	1241–1248
A list of photosynthesis conferences and of edited books in photosynthesis <i>Govindjee</i>	1249–1262
In memoriam	1263–1265
Author index	1267–1268
Photo index	1269–1275
Subject index	1277–1291
Name index	1293–1304
