Preface

Part One: Optical Methods

1 Developments in Classical Optical Spectroscopy

Jan Amesz

Summary

- I. Introduction
 - II. Absorption and Absorption Difference Spectroscopy
 - III. Fluorescence
- References

2 Linear and Circular Dichroism

Győző Garab

Summary

- I. Introduction
 - II. Linear Dichroism
 - III. Circular Dichroism
 - IV. Concluding Remarks
- Acknowledgements
References

3 Fluorescence

Kenneth Sauer and Martin Debroczeny

Summary

- I. Introduction
 - II. Steady-State Fluorescence
 - III. Time-Resolved Fluorescence
 - IV. Conclusion
- Acknowledgements
References

4	Ultrafast Spectroscopy of Photosynthetic Systems	63
	<i>Ralph Jimenez and Graham R. Fleming</i>	
	Summary	63
	I. Introduction	63
	II. Laser Sources	64
	III. Fluorescence Upconversion	66
	IV. Transient Absorption	70
	V. Concluding Remarks	72
	References	72
5	Data Analysis of Time-Resolved Measurements	75
	<i>Alfred R. Holzwarth</i>	
	Summary	75
	I. Introduction	76
	II. Methods for Time-Resolved Data Analysis	76
	III. Some Applications to Photosynthesis	87
	IV. Conclusions	89
	Acknowledgements	91
	References	91
6	Photosynthetic Thermoluminescence as a Simple Probe of Photosystem II Electron Transport	93
	<i>Yorinao Inoue</i>	
	Summary	93
	I. Introduction	94
	II. Origins of TL from Photosynthetic Apparatus	94
	III. Application of TL as a Probe of PSII Photochemistry	103
	IV. Perspective: Merits and Demerits of TL Technique	104
	Acknowledgements	105
	References	105
7	Accumulated Photon Echo Measurements of Excited State Dynamics in Pigment-Protein Complexes	109
	<i>Thijs J. Aartsma, Robert J.W. Louwe and Peter Schellenberg</i>	
	Summary	109
	I. Introduction	109
	II. Homogeneous and Inhomogeneous Linewidths	110
	III. Photon Echo Phenomena	111
	IV. Accumulated Photon Echo: Experimental	114
	V. Energy Transfer	116
	VI. Photon Echo Experiments on Reaction Centers	118
	VII. Conclusion and Perspectives	119
	Acknowledgements	120
	References	120

8	Spectral Hole Burning: Methods and Applications to Photosynthesis	123
	<i>N. Raja S. Reddy and Gerald J. Small</i>	
	Summary	123
	I. Introduction	124
	II. Experimental Methods	126
	III. Applications	129
	Acknowledgements	134
	References	135
9	Infrared and Fourier-Transform Infrared Spectroscopy	137
	<i>Werner Mäntele</i>	
	Summary	137
	I. Introduction: Looking Back 100 Years	138
	II. What can Infrared Spectroscopy Tell us about the Processes in Photosynthetic Membranes and Reaction Centers?	139
	III. From Bands to Bonds: Strategies for Band Assignments	139
	IV. Fourier-Transform Infrared (FTIR) Spectroscopy	141
	V. Single Wavelength IR Techniques	152
	VI. Sample Preparation for Infrared Spectroscopy	155
	VII. Conclusions and Outlook	157
	Acknowledgements	157
	References	157
10	Resonance Raman Studies in Photosynthesis – Chlorophyll and Carotenoid Molecules	161
	<i>Bruno Robert</i>	
	Summary	161
	I. Introduction	162
	II. Introduction to Raman and Resonance Raman Spectroscopy	162
	III. Resonance Raman Spectroscopy of Photosynthetic Pigments	163
	IV. Resonance Raman Spectroscopy as Method of Chemical Analysis in Photosynthesis	167
	V. Resonance Raman Spectroscopy as a Probe for Molecular Conformation	168
	VI. Resonance Raman Spectroscopy as a Probe for Intermolecular Interactions	169
	VII. Time-Resolved Resonance Raman Studies	171
	VIII. Resonance Raman Spectroscopy as a Probe for Studying the Nature of Electronic Transitions	172
	IX. Perspectives	173
	Acknowledgements	174
	References	174
11	Stark Spectroscopy of Photosynthetic Systems	177
	<i>Steven G. Boxer</i>	
	Summary	177
	I. Introduction	177
	II. Methods	178
	III. Limitations and Conceptual Issues	181
	IV. Examples of Recent Results for Photosynthetic Systems	184
	Acknowledgements	188
	References	188

12	The Photoacoustic Method in Photosynthesis – Monitoring and Analysis of Phenomena Which Lead to Pressure Changes Following Light Excitation	191
	<i>Shmuel Malkin</i>	
	Summary	191
	I. Introduction – Historical Notes and Main Aspects	192
	II. Experiments and Results with the Gas-phase Coupled Microphone	194
	III. Experiments and Results in the μsec Time Domain with a Sample Coupled Piezoelectric Sensor	202
	IV. Applications to Physiological Studies	204
	References	204
	<i>Part Two: Magnetic Resonance</i>	
13	Magnetic Resonance: An Introduction	209
	<i>Arnold J. Hoff</i>	
14	Time-Resolved Electron Paramagnetic Resonance Spectroscopy – Principles and Applications	211
	<i>Haim Levanon</i>	
	Summary	211
	I. Introduction	212
	II. Experimental	213
	III. Results	218
	IV. Concluding Remarks	229
	Acknowledgements	229
	References	230
15	Electron Spin Echo Methods in Photosynthesis Research	235
	<i>R. David Britt</i>	
	Summary	235
	I. Introduction	235
	II. ESEEM	238
	III. ESE-ENDOR	243
	IV. Additional Examples of ESE Applications in Photosynthesis	246
	V. Instrumentation	249
	Acknowledgements	252
	References	252
16	ENDOR Spectroscopy	255
	<i>Wolfgang Lubitz and Friedhelm Lenzian</i>	
	Summary	255
	I. Introduction	256
	II. Principles of Electron–Nuclear Multiple Resonance Spectroscopy	258
	III. Selected Applications of ENDOR to Photosynthesis	268
	IV. Concluding Remarks	272
	Acknowledgements	272
	References	272

17	Optically Detected Magnetic Resonance (ODMR) of Triplet States in Photosynthesis	277
	<i>Arnold J. Hoff</i>	
	Summary	277
	I. Introduction	278
	II. The Triplet Spin Hamiltonian in Zero Magnetic Field	278
	III. Optical Detection of Magnetic Resonance, ODMR	279
	IV. Double Resonance	284
	V. ODMR in Photosynthesis	288
	VI. Concluding Remarks	295
	References	295

18	Magic Angle Spinning Nuclear Magnetic Resonance of Photosynthetic Components	299
	<i>Huib J.M. de Groot</i>	
	Summary	299
	I. Introduction	300
	II. Magic Angle Spinning NMR Spectroscopy	300
	III. Probing the Local Environment of M(Y)210 in <i>Rb. sphaeroides</i> R26 RC with MAS	302
	IV. The Configuration of the Spheroidene in the <i>Rb. sphaeroides</i> RC	305
	V. The Asymmetric Q _A Binding in <i>Rb. sphaeroides</i> R26	306
	VI. New Developments. CIDNP and Correlation Spectroscopy	309
	VII. Concluding Remarks	312
	Acknowledgements	312
	References	312

Part Three: Structure and Oxygen

19	Structure Determination of Proteins by X-Ray Diffraction	317
	<i>Marianne Schiffer</i>	
	Summary	317
	I. Introduction	317
	II. Theory, Equations, and Some of the Terms Used in X-Ray Structure Determination	318
	III. Determination of Protein Structure	318
	IV. Quality of the Structure	323
	V. Comparison with Structural Information Obtained with Other Techniques	323
	Acknowledgements	323
	References	324

20	Electron Microscopy	325
	<i>Egbert J. Boekema and Matthias Rögner</i>	
	Summary	325
	I. Principles	326
	II. Periodic Averaging	330
	III. Single Particle Averaging	332
	IV. Concluding Remarks	335
	Acknowledgements	335
	References	335

21	X-Ray Absorption Spectroscopy: Determination of Transition Metal Site Structures in Photosynthesis	337
	<i>Vittal K. Yachandra and Melvin P. Klein</i>	
	Summary	337
	I. Introduction	338
	II. X-Ray Absorption Spectroscopy (XAS)	338
	III. Applications of XANES and EXAFS in Photosynthesis	345
	IV. Future Directions	350
	Acknowledgements	351
	References	352
22	Mössbauer Spectroscopy	355
	<i>Peter G. Debrunner</i>	
	Summary	355
	I. Introduction	356
	II. Mössbauer Spectroscopy: Physics and Formalism	357
	III. Applications	365
	References	371
23	Characterization of Photosynthetic Supramolecular Assemblies Using Small Angle Neutron Scattering	375
	<i>David M. Tiede and P. Thiyagarajan</i>	
	Summary	375
	I. Introduction	376
	II. Small Angle Neutron Scattering	377
	III. SANS Studies of Photosynthetic Complexes	379
	IV. Concluding Remarks	388
	Acknowledgements	388
	References	389
24	Measurement of Photosynthetic Oxygen Evolution	391
	<i>Hans J. van Gorkom and Peter Gast</i>	
	Summary	391
	I. Introduction	392
	II. Polarography	392
	III. EPR Oximetry	398
	IV. Mass Spectrometry	401
	V. Photoacoustic Spectroscopy	402
	VI. Galvanic Sensors	402
	VII. Prospects	402
	Acknowledgements	403
	References	403
	Index	407
