# Contents

<b>Preface</b>	<b>xvii</b>
<b>Color Plates</b>	<b>CP-1</b>
<b>1 Introduction to Chlamydomonas</b>	<b>1–11</b>
<i>Elizabeth H. Harris</i>	
Summary	1
I. Why Chlamydomonas?	1
II. Cell Architecture	3
III. Life Cycle	3
IV. Laboratory strains of <i>Chlamydomonas reinhardtii</i>	4
V. Genetic Analysis	6
VI. Molecular Biology	7
VII. Resources	7
Acknowledgment	8
References	8
<b>2 Perspectives on Early Research on Photosynthesis in Chlamydomonas</b>	<b>13–23</b>
<i>Robert K. Togasaki and Stefan J. Surzycki</i>	
Summary	13
I. General Background	13
II. The Levine Laboratory in the Early 1960s	14
III. Establishment of <i>Chlamydomonas reinhardtii</i> as a Legitimate Model Organism	15
IV. Development of New Techniques	18
V. Emergence of New Research Targets	19
VI. Old Experiments Becoming Reality	21
Acknowledgment	21
References	22
<b>3 Organization of the Nuclear Genome</b>	<b>25–40</b>
<i>Carolyn D. Silflow</i>	
Summary	25
I. Introduction and Scope	26
II. General Characteristics of the Nuclear Genome	26
III. Organization of the Genome	26
IV. Characteristics of Chlamydomonas Genes Transcribed by Polymerase II	30
IV. Physical Mapping of the Chlamydomonas Genome	36
VI. Future Prospects	37
Acknowledgments	37
References	37
<b>4 Nuclear Transformation: Technology and Applications</b>	<b>41–61</b>
<i>Karen L. Kindle</i>	
Summary	42
I. Introduction	42
II. A Brief History of <i>C. reinhardtii</i> Nuclear Transformation	42

	III. Selectable Markers	43
	IV. Methods for Introducing DNA into the Nuclear Genome of <i>C. reinhardtii</i>	45
	V. Reporters and Promoters	46
	VI. Characteristics of Transformation Events	48
	VII. Insertional Mutagenesis and Gene Tagging	51
	VIII. Gene Isolation by Complementation of a Mutant Phenotype	54
	IX. Homologous Recombination and Gene Targeting	54
	X. The Use of Nuclear Transformation to Study Promoter Function	56
	XI. Conclusion	58
	Acknowledgments	58
	References	58
<b>5</b>	<b>Modes and Tempos of Mitochondrial and Chloroplast Genome Evolution in <i>Chlamydomonas</i>: A Comparative Analysis</b>	<b>63–91</b>
	<i>Aurora M. Nedelcu and Robert W. Lee</i>	
	Summary	63
	I. Introduction	64
	II. Phylogenetic Position of <i>Chlamydomonas</i>	64
	III. Monophyletic versus Polyphyletic Origin of Mitochondria and Plastids: The <i>Chlamydomonas</i> Case	65
	IV. Evolution of Mitochondrial and Chloroplast Genome Size in <i>Chlamydomonas</i>	69
	V. Evolution of Mitochondrial and Chloroplast Genome Organization in <i>Chlamydomonas</i>	79
	VI. Evolution of Mitochondrial and Chloroplast Gene Structure and Organization in <i>Chlamydomonas</i>	82
	VII. Evolution of Mitochondrial and Chloroplast DNA Sequences in <i>Chlamydomonas</i>	85
	VIII. Conclusions	87
	Acknowledgments	87
	References	87
<b>6</b>	<b>Uniparental Inheritance of Chloroplast Genomes</b>	<b>93–113</b>
	<i>E. Virginia Armbrust</i>	
	Summary	93
	I. Introduction	94
	II. Historical Overview of the Uniparental Inheritance of Chloroplast DNA	95
	III. Mating-Type Control of Life Cycle Events	98
	IV. Protection of Plus Chloroplast DNA	101
	V. Zygote Specific Elimination of Minus Chloroplast DNA	103
	VI. Regulation of Chloroplast DNA Inheritance	108
	VI. Evolution of the Uniparental Inheritance of Organelle Genomes	110
	Acknowledgments	110
	References	110
<b>7</b>	<b>Replication, Recombination, and Repair in the Chloroplast Genetic System of <i>Chlamydomonas</i></b>	<b>115–138</b>
	<i>Barbara B. Sears</i>	
	Summary	115
	I. Introduction	116
	II. Replication	116
	III. Recombination	123
	IV. Repair	130

	V. Perspectives and Conclusions	133
	Acknowledgments	133
	References	133
<b>8</b>	<b>Chloroplast Transformation and Reverse Genetics</b>	<b>139–149</b>
	<i>Michel Goldschmidt-Clermont</i>	
	Summary	139
	I. Introduction	140
	II. Delivery of DNA to the Chloroplast	140
	III. Selectable Markers and Reporters	140
	IV. Fate of Transforming DNA	142
	V. Reverse Genetics	147
	VI. Conclusion and Perspective	147
	Acknowledgments	148
	References	148
<b>9</b>	<b>Chloroplast RNA Stability</b>	<b>151–163</b>
	<i>Jörg Nickelsen</i>	
	Summary	151
	I. Introduction	152
	II. Cell Cycle Dependent Regulation of Chloroplast RNA Stability	152
	III. Nuclear Mutants Affected in Chloroplast RNA Stability	154
	IV. Towards a Molecular Model of Chloroplast RNA Stabilization/Degradation	154
	V. Conclusions and Perspectives	161
	Acknowledgments	161
	References	161
<b>10</b>	<b>Chloroplast RNA Synthesis and Processing</b>	<b>165–183</b>
	<i>David B. Stern and Robert G. Drager</i>	
	Summary	165
	I. Transcription of Chloroplast Genes	166
	II. Processing of Chloroplast mRNAs	171
	Acknowledgments	177
	References	177
<b>11</b>	<b>RNA Splicing in the Chloroplast</b>	<b>183–195</b>
	<i>David L. Herrin, Tai-Chih Kuo and Michel Goldschmidt-Clermont</i>	
	Summary	183
	I. Introduction	184
	II. Group I Introns	184
	III. Group II Introns and Trans-Splicing	190
	IV. Perspective	193
	Acknowledgments	193
	References	193
<b>12</b>	<b>Regulation of Chloroplast Translation</b>	<b>197–217</b>
	<i>Charles R. Hauser, Nicholas W. Gillham and John E. Boynton</i>	
	Summary	197
	I. Introduction	198
	II. The Role of Physiological and Environmental Factors in Translational Control	200

III. Current Biochemical and Genetic Approaches to Dissect Mechanisms of Translational Regulation	202
IV. <i>Cis</i> -acting Sequences Involved in Translation Initiation	203
V. Translational Regulation Involves Interactions between <i>cis</i> -Acting Sequences and <i>trans</i> -Acting Factors	205
VI. Ribosomes, Membranes and Tethers	209
VII. Translational Regulation of Complex Assembly	211
VIII. How are the Regulatory Proteins Regulated?	212
IX. Is there Hierarchical Control of Chloroplast mRNA Translation?	213
Acknowledgments	214
References	214

### **13 Chloroplast Protein Translocation** **219–231**

*Mireille C. Perret, Karen K. Bernd and Bruce D. Kohorn*

Summary	219
I. Introduction	220
II. Chloroplast Import	220
III. Sorting of Proteins Within the Chloroplast	222
IV. Thylakoid Translocation	223
V. Mutations Affecting Translocation	226
VI. Perspectives	228
Acknowledgments	229
References	229

### **14 Supramolecular Organization of the Chloroplast and of the Thylakoid Membranes** **233–254**

*Jacqueline Olive and Francis-André Wollman*

Summary	234
I. Introduction	234
II. Cell and Chloroplast Morphology	235
III. Ultrastructural Organization of Thylakoid Membranes	239
IV. Dynamic Aspects of Thylakoid Membrane Organization	246
V. Biogenesis	248
VI. Conclusion	250
Acknowledgment	251
References	251

### **15 Assembly of Photosystem II** **255–285**

*Jeanne Marie Erickson*

Summary	255
I. Introduction	256
II. Developmental Biogenesis of Photosystem II	257
III. Assembly of Photosystem II Complexes	260
IV. Assembly of the Extrinsic Membrane Polypeptides of the PS II Oxygen-Evolving Complex	270
V. Assembly of Manganese: The Catalytic Center of the Oxygen-Evolving Complex	273
Acknowledgments	277
References	277

<b>16</b>	<b>Functional Analysis of Photosystem II</b>	<b>287–322</b>
	<i>Stuart V. Ruffle and Richard T. Sayre</i>	
	Summary	287
	I. Introduction	288
	II. The Photosystem II Complex	289
	III. The Chloroplast DNA Encoded Small Polypeptides of Photosystem II	308
	IV. The Nucleus Encoded Polypeptides of the Photosystem II Complex	311
	V. Perspectives	315
	Acknowledgments	315
	References	315
<b>17</b>	<b>Structure and Function of Photosystem I</b>	<b>323–348</b>
	<i>Andrew N. Webber and Scott E. Bingham</i>	
	Summary	324
	I. Introduction	324
	II. Structure of Photosystem I	325
	III. Nature and Function of Electron Transfer Cofactors	328
	IV. Antenna Structure and Function	332
	V. Function of Photosystem I Subunits	333
	VI. Biogenesis of Photosystem I	341
	Acknowledgments	344
	References	344
<b>18</b>	<b>Reexamining the Validity of the Z-Scheme: Is Photosystem I Required for Oxygenic Photosynthesis in Chlamydomonas?</b>	<b>349–362</b>
	<i>Kevin Redding and Gilles Peltier</i>	
	Summary	349
	I. The Z-Scheme of Oxygenic Photosynthesis and Alternative Schemes	350
	II. Electron Transport in the Absence of PS II	351
	III. Photosynthesis in the Absence of PS I	354
	IV. Putative Electron Transport Pathways Outside of the Z-Scheme	357
	V. Thermodynamic Considerations	358
	VI. Evolutionary Considerations	358
	VII. Conclusions	359
	Acknowledgments	359
	References	360
<b>19</b>	<b>Assembly of Light-Harvesting Systems</b>	<b>363–376</b>
	<i>J. Kenneth Hooper, Hyoungshin Park, Gregory R. Wolfe, Yutaka Komine and Laura L. Eggink</i>	
	Summary	363
	I. Thylakoid Biogenesis in Chlamydomonas	364
	II. Analysis of LHCII Assembly	366
	III. Site of Assembly of LHCII During Initial Greening	368
	IV. Conclusions	371
	Acknowledgments	373
	References	373

<b>20</b>	<b>Pigment Biosynthesis: Chlorophylls, Heme, and Carotenoids</b>	<b>377–414</b>
	<i>Michael P. Timko</i>	
	Summary	378
	I. Introduction	378
	II. Tetrapyrroles and Their Derivatives—An Overview	378
	III. Formation of ALA	379
	IV. The Pathway from ALA to Protoporphyrin IX	383
	V. The Magnesium Branch—Chlorophyll Formation	388
	VI. The Iron Branch—Formation of Heme	397
	VII. Light and Metabolic Regulation of Chlorophyll Formation	398
	VIII. Carotenoids	401
	Acknowledgments	406
	References	406
<b>21</b>	<b>Glycerolipids: Composition, Biosynthesis and Function in Chlamydomonas</b>	<b>415–431</b>
	<i>Antoine Trémolières</i>	
	Summary	415
	Introduction	416
	II. Glycerolipid and Fatty Acid Composition of Chlamydomonas	417
	III. Lipid Metabolic Pathway in <i>Chlamydomonas</i> spp.	422
	IV. In vivo Modifications of Lipid Composition in Chlamydomonas	425
	V. Mutants Affected in Lipid Composition	426
	VI. Involvement of Lipids in the Functional Organization and the Biogenesis of the Photosynthetic Apparatus	428
	Acknowledgments	429
	References	429
<b>22</b>	<b>In vivo Measurements of Photosynthetic Activity: Methods</b>	<b>433–449</b>
	<i>Pierre Joliot, Daniel Béal and René Delosme</i>	
	Summary	433
	I. Introduction	434
	II. Kinetic Analysis of the Fluorescence Yield	436
	III. Fluorescence Emission Spectra at Low Temperature	439
	IV. Delayed Fluorescence Measurements	439
	V. Oxygen Measurements	439
	VI. Absorption Spectroscopy	440
	VII. Photoacoustic Measurements	443
	VIII. Conclusion and Perspectives	445
	Appendix A: Estimation of the Signal-to-Noise Ratio in Fluorescence Measurements	446
	Appendix B: Flash Spectrophotometer	446
	Acknowledgment	448
	References	448
<b>23</b>	<b>New Digital Imaging Instrument For Measuring Fluorescence and Delayed Luminescence</b>	<b>451–458</b>
	<i>Pierre Bennoun and Daniel Béal</i>	
	Summary	451
	I. Introduction	452
	II. Setup for Fluorescence and Delayed Luminescence Video Imaging	452

	III. Digital Fluorescence Imaging Related to Photosynthetic Electron Transfer	452
	IV. Digital Fluorescence Imaging Related to the Permanent Thylakoid Electrochemical Gradient	453
	V. Digital Delayed Luminescence Imaging Related to Light-Induced and Permanent Thylakoid Electrochemical Gradient	455
	Acknowledgments	457
	References	457
<b>24</b>	<b>The Structure, Function and Biogenesis Of Cytochrome <math>b_6f</math> Complexes</b>	<b>459–476</b>
	<i>Francis-André Wollman</i>	
	Summary	460
	I. General Traits	460
	II. Biochemical and Structural Studies	461
	III. Functional Studies	463
	IV. The <i>pet</i> Genes	466
	V. Biogenesis and Assembly	467
	VI. Concluding Remarks	472
	Acknowledgments	474
	References	474
<b>25</b>	<b>Assembly and Function of the Chloroplast ATP Synthase</b>	<b>477–500</b>
	<i>Heinrich Strotmann, Noun Shavit and Stefan Leu</i>	
	Summary	477
	I. Introduction	478
	II. Structure of $CF_0CF_1$	478
	III. Molecular Genetics of $CF_0CF_1$	482
	IV. Mechanism of $CF_0CF_1$	487
	V. Regulation of $CF_0CF_1$	492
	VI. Conclusions	494
	References	494
<b>26</b>	<b>Molecular Aspects of Components of the Ferredoxin/Thioredoxin Systems</b>	<b>501–514</b>
	<i>Jean-Pierre Jacquot, Mariana Stein, Stéphane Lemaire, Paulette Decottignies, Pierre Le Maréchal and Jean-Mark Lancelin</i>	
	Summary	501
	I. Introduction	502
	II. Ferredoxin Dependent Systems	505
	III. Thioredoxin Dependent Systems	508
	IV. Conclusion	511
	Acknowledgment	512
	References	512
<b>27</b>	<b>Genetic Engineering of Rubisco</b>	<b>515–527</b>
	<i>Robert J. Spreitzer</i>	
	Summary	515
	I. Introduction	516
	II. Chloroplast Genetic Screening and Selection	518

	III. Directed Mutagenesis and Chloroplast Transformation	521
	IV. Rubisco Nuclear Mutants	523
	V. Conclusion and Perspective	524
	Acknowledgments	524
